ECLADERM EVEN SKIN CREAM

Based on **1% Arbutin**

Attenuates and prevents skin hyperpigmentation

PARABEN-FREE

50 ml/1.69 fl. oz. tube

Description

ECLADERM Even skin cream is a treatment for skin hyperpigmentation blemishes in the face and other localised areas, such as melanin spots, post-acne and post-aesthetic treatment blemishes. Based on Arbutin, also includes Vitamins E, F, C and Glutathione, carried in liposomes for increased effectiveness.

Benefits

Favours the reduction of localised dark spots, melasma, age spots and evens out skin tone. Also suitable as post-treatment care in dermatology (laser, peels) to maintain results.

How to use

Apply to the face in the morning, insisting on the areas with hyperpigmentation.

Contains

- **1% Arbutin**: carried in liposomes for better penetration, this ingredient is a hydroquinone derivative that inhibits the formation of melanin. The use of liposomes as a carrier allows a slower, gradual release to achieve longer lasting effectiveness
- Vitamins E, F, C: have anti-oxidant effects

Ingredients (INCI)

INGREDIENTS: AQUA, ETHYLHEXYL METHOXYCINNAMATE, CAPRYLIC/CAPRIC TRIGLYCERIDE, GLYCERIN, 4-METHYLBENZYLIDENE CAMPHOR, CETEARYL ALCOHOL, HYDROGENATED VEGETABLE GLYCERIDES CITRATE, OCTOCRYLENE, TOCOPHERYL ACETATE, BUTYL METHOXYDIBENZOYLMETHANE, GLYCERYL STEARATE, UREA, TITANIUM DIOXIDE, PHENOXYETHANOL, ASCORBYL PALMITATE, STEARIC ACID, ALLANTOIN, SODIUM ASCORBYL PHOSPHATE, ARBUTIN, GLUTATHIONE, LECITHIN,
