

Rosacea and couperose

SENSIVEN ZELAIC SOOTHING CREAM

Based on **1% Rutin** and **15% Azelaic Acid**

Intensive treatment for acute phases of rosacea

PERFUME-FREE, PARABEN-FREE

50 ml/1.69 fl. oz. tube

Description

SENSIVEN ZELAIC Soothing cream is an intensive, immediately effective specific treatment designed to visibly reduce blemishes typically occurring in couperose-prone skin. It is based on Rutin, which stimulates vessel trophism and elasticity and favours physiological vessel permeability, thereby improving skin microcirculation. Also contains Azelaic Acid, having anti-inflammatory properties, and a set of vegetable substances, which helps to reduce redness, itch and burning.

Benefits

Recommended for acute phases of rosacea. Reduces inflammation, redness and itch typically occurring with papular-pustular rosacea.

How to use

Apply 1 or 2 times a day to skin areas requiring treatment by gently rubbing in until product is fully absorbed

Contains

- **Azelaic acid 15%:** possesses inhibitory activity versus keratinocyte proliferation, anti-bacterial activity, anti-inflammatory and anti-free radical activity, as well as having a depigmenting effect.
- **Rutin 1%:** a natural substance found in plants belonging to a number of families, Rutin is a powerful antioxidant and a vasoprotector, which works by strengthening the capillary wall. For these properties, it is used broadly in cosmetics as a topical therapy for capillary fragility.
- **Symcalmin®:** anti-irritant / anti-itch complex. Reduces pruritus and inflammation.
- **Biophytex:** complex based on Aescin, Ruscus, Centella Asiatica, Calendula. Improves problems related to capillary fragility and reduced microcirculation in the face in general.
