

Scar treatment and keloid prevention

## **KERAFLEX LIPOGEL** PROTECTIVE GEL

Based on **1% Urea**

Hydrates skin and supports trophism of the epidermis.

50 ml / 1.69 fl. oz. tube

### Description

KERAFLEX LIPOGEL is a protective gel, which works by forming an occlusive and emollient film over skin, which favours the decrease of transepidermal water loss and the replenishing of the hydrolipid skin barrier. It is based on 1% Urea and Allantoin, which increase hydration and promote the trophism of the epidermis. In addition, Carbocysteine and Malic Acid prevent and reduce skin thickening.

### Benefits

Protective lipogel that ensures the decrease of transepidermal water loss and a moisturising effect. Prevents and reduces skin thickening.

### How to use

Apply several times a day in a thin layer onto the area to be treated, by rubbing in until completely absorbed. Product effectiveness can be increased by applying a thicker layer of Keraflex Lipogel and then protecting skin with an occlusive bandage before going to bed in the evening.

### Contains

- **1% Urea** and Allantoin: have a moisturising effect. Increase hydration in dry skin and support epidermis trophism
- Carbocysteine and Malic Acid: have a keratolytic effect, thus prevent and reduce skin thickening

### Ingredients (INCI)
